

Science Vs./& Belief

We're what we believe

Friends S2 E3

A heated discussion over Evolution

Ross Geller, a
paleontologist
by profession

Phoebe
Buffay with
unique views

**Don't leave good manners
behind**

Don't leave good manners behind

- Try to understand someone else's side of the story
- Figure out what on earth the barrier is
- Good manners do help with the efficiency of discussion

Doubt everything

Science & Belief

- Be bold in your assumptions, be careful in your evidence
- Science is born to be allowed for doubted.
- Verification is also science.

**Defend your beliefs, Defend
for science**

Follow or not, this is a question

Figure 1: Darwin

Figure 2: Kopernikus

Figure 3: Tesla

- Appreciation is a good choice, so does objection
- You don't want to easily drop your belief down
- Better leave the copy work to AI and robots in modern times

**Beliefs save rather than
enslave us**

The ThreeBody Problem

The sun will set soon. Isn't your child afraid?

Of course she's not afraid. She knows that the sun will rise again tomorrow.

Beliefs save rather than enslave us

- Beliefs help us live a better life
- It's the way we face different beliefs makes us who we exactly are
- Beliefs shouldn't be the prison that we built for ourselves
- We can barely bend the world's knees to our beliefs, unless it truly support us to change the world

我，在准备过一条单行道时
还在反复看两边有没有来车
这就是我对人性的信任程度

Thanks for attention
